The attached includes 15 analytes from gamma spectroscopy. We only requested one analyte that is on this list, cesium-137. We did not request any other of the analytes on this list. We can if we need to, but it may increase the turn around time to get the results.

Do we need to request the entire list of analytes?

No, I care not for the analysis but the actual analyte names regardless of analysis.

Make sense? Will they match up?

The only gamma spec analytes we have are Cs-137. I believe we can get any gamma emitters that we want without extra cost, but I'm not sure how that will affect the TAT. Should I request all that are on the list?

In addition to gamma spec, we requested the following:

Gross alpha/beta
Isotopic Plutonium 239/240
Isotopic Uranium 234/235/238

9471089

Isotopic Strontium 90
Isotopic Americium 241

Heth and Kristie,

Here is the list of analytes that the state has proposed. How does this compare to what you are requesting from the labs?

M
